EDUCATION

Lovely Professional University, Jalandhar, Punjab

Aug 2022 – Present

Bachelor of Technology - Computer Science and Engineering

GPA: 7.34

Courses: Data Structures, Design and Analysis of Algorithms, Computer Networks, Operating System, Computer Organization and Architecture, Database Management Systems, Programming Languages, Android Application Development

SKILLS SUMMARY

Technologies: MERN Stack, Go-Fiber, React native, Jetpack Compose, AWS, Azure, selenium and puppeteer

Languages: Java, JavaScript/Typescript, Go, Kotlin, Python, C/C++, SQL, XML

Databases: MySQL, MongoDB, DynamoDB, PostgreSQL, Redis

Soft Skills: Adaptability, Leadership, Organization

Others: Proficient in applying data structures and algorithms, demonstrated ability to analyze and resolve complex issues

EXPERIENCE

Mobile Application Developer Intern at Webcube infotech (React Native, Typescript)

Jun – Oct 2024

- Created Bean, an AI-driven application that simplifies pantry management and recipe discovery; reduced user meal prep time by an average of 30 minutes per week, significantly improving the cooking experience for users.
- Designed and executed a series of performance tuning initiatives that improved application efficiency by reducing resource consumption by 30%; directly resulted in enhanced overall user experience across the platform.
- Constructed visually appealing user interfaces with React Native components that streamlined pantry management features; findings from usability testing highlighted three primary areas where enhancements eliminated common user frustrations.

Full-stack Developer, PiCode Solutions (NodeJS, AWS, DynamoDB, React-native)

Jan – Apr 2024

- Optimized back-end performance and application speed for LOADEZ, a logistic application, enhancing overall user experience.
- Launched an innovative vendor matching algorithm that resolved logistical challenges for over a large amount of users, facilitating faster service delivery and reducing manual intervention by 60%, positively impacting overall operational efficiency.
- Engineered a robust back-end infrastructure utilizing Node.JS, AWS Lambda functions and Firebase for authentication and notification systems, ensuring secure user interactions.

Front-end Developer, Greenbhumi (ReactJS, materialUI)

Jun – Aug 2023

- Led the development of a robust student dashboard that consolidated learning materials and performance analytics, enabling efficient tracking of assignments and improving course completion rates.
- Leveraged React and Material UI to architect an intuitive and visually appealing interface, fostering enhanced user engagement and satisfaction.

PROJECTS

Find My Verto, (React Native, NodeJS, Typescript, Golang, MongoDB, FCM, Azure) | [Link](#)

Oct 2023 - Present

- Built and scaled a cross-platform (Android & iOS) student companion app for LPU, serving 100+ monthly active users, using React Native (frontend) and Node.js + MongoDB (backend), deployed on a minimal-resource Azure B1 instance.
- Re-architected fragile scrapers by reverse-engineering LPU's internal APIs (via browser network tools), replacing Puppeteer-based crawling for efficient, robust data extraction.
- Implemented real-time notifications (FCM) and OTA updates, optimized UX/UI, and introduced in-app analytics for seamless user engagement and insight tracking.
- Engineered scalable APIs with load balancing and horizontal scaling; ensured high reliability with minimal resource consumption and strong client-side error resilience.
- Implemented a modular backend architecture using Node.js, enhancing code maintainability by 60% and reducing deployment times by 30% compared to monolithic academic application designs.

Retro-Bazaar, (MERN stack, OAuth) | [Link](#)

Jun - Aug 2023

- Authored a comprehensive buy-and-sell platform tailored for universities, integrating e-commerce functionalities and elevating user engagement through a visually stunning front-end.
- Leveraged the capabilities of the MERN stack (MongoDB, Express.JS, React.J.S., Node.js) to deliver an exceptional user experience that improved loading times by 30% and enhanced overall system reliability.

Clipy, (Go, Kotlin, XML, Websockets) | [Link 1](#), [Link 2](#)

Dec 2024

- Developed a bidirectional clipboard synchronization tool with a lightweight Go server and Kotlin-based Android client, enabling seamless real-time clipboard sharing between Android and PC via WebSockets.
- Designed background services for clipboard sync with notifications to manage service states, ensuring uninterrupted functionality and enhanced user experience.
